Aspiring Data Scientist | ML & Computational Research

Profile Summary

Integrated B.Sc.–M.Sc. Data Science student at VIT-AP with a strong foundation in Machine Learning and Bioinformatics. Proven expertise in solving challenges through ML-driven fraud detection, legal workflow digitization, and AI-based virtual screening. Experienced in leading technical club operations and managing team productivity.

Education

B.Sc.–M.Sc. Data Science (Integrated), *VIT-AP University*, Amaravati, AP, CGPA: 8.36 (top 20%)
Intermediate (MPC), *Sri Chaitanya Junior College*, Vijayawada, AP

Research & Publications

In-Draft **Research Review Paper**, *A Data-Centric and AI-Based Virtual Screening in Drug Discovery*
- Reviewing Machine Learning (ML) integration with classical docking to optimize drug-target predictions.
- Analyzing hybrid AI-physics models to mitigate bias in molecular datasets.

Technical Skills

Languages	SQL, Python (Pandas, NumPy, Scikit-learn, Matplotlib), R, Matlab, HTML/CSS
Research	AI & Machine Learning, Predictive Modeling, AutoDock, MOE, Bioinformatics
Frameworks	Flask (Advanced), PyCharm, Jupyter Notebooks, Git
Tools	Tableau, Google Cloud Platform (GCP), VS Code

Selected Projects

Repository **Banking Customer Query Classifier (NLP)**, *Python, NLTK, Scikit-learn, SpaCy, Flask*
- Engineered end-to-end NLP workflows for text preprocessing, tokenization, lemmatization, TF-IDF and Word2Vec features to route banking queries into 8 intents.
- Compared 5 classifiers across 6 feature sets; a calibrated LinearSVC reached 97.07% accuracy and 96.42% Macro-F1 on 818 held-out queries, deployed as a Flask web app.

Hackathon **SMTPS – Smart Meter Tampering Prevention & Ticket Prioritization**, *React, Node.js, SQLite*
- Built a platform with customer, technician and admin portals that flags meter tampering and power theft.
- Developed K-Means clustering from scratch to rank meters by risk so technicians inspect high-risk meters first.
- Added OCR-based appliance audits (Tesseract.js, Fuse.js) and theft scoring with email alerts to inspectors.

Hackathon **LawDocx – Legal Forms Digitisation Platform**, *Python, Flask, HTML/CSS*
- Designed a full-stack platform to digitize judicial forms and paperwork.
- Created structured, clean forms for petitions, affidavits, and applications.
- Built a robust Flask back-end for secure form routing and legal data handling.

Leadership & Managerial Roles

Current **Vice President**, *Data Science Club (DSC)*, VIT-AP University, Amaravati
- Directing strategic initiatives, club operational workflows, and technical team execution for 100+ student members.
- Organized the "Research on Law" workshop (Oct 2026): 110+ live viewers and 150+ total audience.

Previous **V-TOP Manager**, *Data Science Club (DSC)*, VIT-AP University, Amaravati
- Streamlined student operational workflows using agile principles to optimize performance.
- Tracked peer contributions and enforced standards of productivity and active punctuality.
- Managed administrative requirements and course credits for 100+ student cohorts.

Achievements & Certifications

Awards	Runner-up at Technov Hackathon; Winner of Cloud Clash (NextGen Cloud Club)
Certifications	AWS APAC (Forage); Full-stack Dev (Purple Tech); Tableau (Infosys Springboard)
Participation	VIT-AP Datathon 2025; Radiothon Winter 2026 hackathon (Radion Inc.)
